

NewNight Bollard Luminaire BeeBLADE

This BeeBLADE bollard luminaire from the NewNight series is suitable for a path or orientation lighting for city passages, residential and office complexes, in parks and gardens, on paths, outside stairs and staircases as well as on access roads and garage entrances.

The light is controlled by a BeeBLADE LED lens system for 360° rotationally symmetrical light distribution, alternatively asymmetrical steering. The simple luminaire body and bollard head are made of aluminum, on request with a painted or anodized surface. The optical cover is made of impact-resistant, UV and weather-resistant, crystal-clear plastic. Depending on the installation location, BeeBLADE can be installed at different heights, above floor level: from 1,000 to 5,000 mm.
