

Saturn 2 Highbay

Two COBs replace old hall radiators up to 250 W

The Saturn 2 Highbay high-intensity light is ideal for retrofitting outdated lighting systems in commercial halls. With two COBs, it replaces indoor radiators up to 250 W. The reflectors and COBs can be changed if necessary. Overlying high-performance aluminum heat sinks prevent overheating.

According to BRAUN's Future-Proof principle, the COBs and reflector system can be easily replaced with newer technology in the future. Easy installation, the standard preparation for chain suspension with stainless steel eyebolts, guarantees fast conversion times. Various control options can be implemented on request.

The decision whether a Saturn 1, 2, or 3 is suitable for your lighting project depends on the mounting height and the desired amount of light. Contact our skilled technicians for support.
