

NewNight Bollard Luminaire BLADE1000

Simple elegance with an up to 20 m light radius

High-quality aluminum and an optional UV-stable paint finish give the Bollard Luminaire Blade1000 a particularly long service life. The design impresses with its simple elegance. Specially developed LED high-performance lenses enable a large illumination radius with rotationally symmetrical radiation. With a light point distance of up to 20 m, it is easy to avoid the dark zones between the bollard. The blade is versatile and available in different heights, including heights of 800 mm or 600 mm. On request, the bollard luminaire can be supplied with a ground anchor plate or with an integrated ground piece.

Applications for BLADE Bollard luminaires:

- Illumination of walkways and bike paths
- Docks and harbors
- Golf courses
- Green areas and parks
- Shorelines and promenades
- Parking lots
