

NewNight LED Light Beam

Magnetic LED Spots for quick mounting - 7-, 9-watt or single spot-variations

The LED Beam spotlights are small, powerful spots that attach magnetically and are therefore versatile. They can be mounted on top of a street luminaire and thus set hidden lighting accents, for example, for facade or landscape illumination.

These spotlights rotate 360° and pivot 180° via the magnetic ball joint. More flexibility in light control is not possible.

The LED light beam is available in a 7-watt or 9-watt power options. Both versions are available with different optics and color temperatures from 2700 K up to 5700 K. Moreover, they are suitable as a single solution for countless areas of application.

This highly durable LED spot is supplied ready for connection and has proven itself as a real all-rounder.
