

NewNight LED Single Spot

Magnetic LED Single Spots for quick mounting

The LED single spotlights are small, powerful spots that attach magnetically and are therefore versatile. They can be mounted on top of a street luminaire and thus set hidden lighting accents, for example, for facade or landscape illumination.

These spotlights rotate 360° and pivot 180° via the magnetic ball joint. More flexibility in light control is not possible. This highly durable LED spot is supplied ready for connection and has proven itself as a real all-rounder.
