Saturn13

Power on – strong light for special demands
The high-intensity light lamp Saturn13 is the escalation of Saturn7 and brings even more light output (up to 158k lm) for large areas of all kinds. The excellent ratio between wind exposure area, weight, and the excellent high illuminance (151 lm/W) predestines the luminaire for demanding applications.

The Saturn13 can be optimally adapted to the lighting task by means of various interchangeable reflectors. This long-life and maintenance-free, high-intensity light luminaire from BRAUN is ideal for replacing mercury and metal-halide headlamps in existing mast installations and for new planning.
