

His.lux Premium Module

BRAUN offers His.lux in a premium version. Light color, luminous intensity, light distribution, and system output (wattage) can be selected as desired. His.lux modules are characterized by extremely compact dimensions and thus enable simple installation in a wide variety of luminaire fixtures. The gas-imitating LED GASLight variant is in great demand, particularly in the field of historic old town lighting.

All modules have optional functions such as dimming and/or a timer – on request, it is also possible to order a constant light function or regulation using a coding switch or service device.
