

His.lux Universal Modules 1/2/3

BRAUN offers His.lux in various sizes - 1, 2, 3, 4, and 6 modules

The variation depends on the size of the luminaire to be converted and thus the interior of the luminaire. On the other hand, depending on the module and customer requirements, light color, luminous intensity, light distribution and system output (wattage) can be selected as desired.

His.lux modules are characterized by extremely compact dimensions and thus enable simple installation in a wide variety of luminaire fixtures. His.lux is available in different light colors. The gas-imitating LED-GASLight version is in particularly high demand in the field of historic old town lighting.

All modules have optional functions such as dimming and/or a timer – on request, it is also possible to order a constant light function or regulation using a coding switch or service device.

After the conversion of a historic lamp
