

Maintenance

Repair and maintenance of a gas candelabra

Everything from a single source - cleaning and replacement

Luminaire and recessed kits from BRAUN are quality products manufactured according to the latest standards. They are subject to constant quality control and are characterized by a long service life. Maintenance and repair costs for LED modules are generally extremely low. The luminaires and/or continuous row systems from BRAUN are always designed to be maintenance-free, true to the company philosophy.

Nevertheless, luminaires and lamps are subject to external influences such as soiling, vandalism, aging of surface materials, or improper care. Upon request, BRAUN takes over the maintenance of its own along with the third-party products. Maintenance tasks include regular inspection and cleaning of luminaires, reflectors, protective glass as well as the replacement of lamps or worn parts.

For many years, we have been a reliable partner in the field of conventional gas lighting. BRAUN proudly services and maintains thousands of gas lanterns in Berlin.
