# Monroe Park residential district, former Telefunken Plant, Berlin-Lichterfelde

**Initial situation:**
After Tempelhof Airport, the former McNair Barracks on Berlin's Goerzallee are the second largest monument in the capital: The site of the former Telefunken plant was expanded in 2007/2008 and a new residential district with a large number of duplexes/condominiums and exclusive residential buildings was built. Monroe Park offers the advantages of urban diversity and a high quality of life on the 30,000 square meter park site of the former Telefunken plant.

**Customer request and order:**
In the context of the light planning stylish lighting was sought. The client wanted discreet and efficient street and path lighting that would fit into the residential environment.

**The solution from BRAUN:**
BRAUN supplied 50 bollard luminaires of the type Blade1000 Poller in protection class 2 with integrated ground section. These noble-looking light steles, here on customer request in neutral light color and with dark grey housing, are the ideal lighting solution for streets and paths in this listed area.
