NewNight cityLED-Module

Ideal for retrofitting case luminaires
The cityLED modules from the NewNight series are ideal for retrofitting case luminaires and for a large number of other luminaire types with conventional NAV/HQL lamps to efficient LED lighting. The NewNight cityLED module is equipped with a COB module and a free-form borosilicate glass lens. The light control of the special lenses guarantees uniform illumination. With pole heights of up to 10 m, luminaire point distances of 30 m are possible without creating dark zones.

This NewNight cityLED installation kit is extremely robust, temperature, and weather-resistant and therefore extremely durable. Especially for cities and municipalities, the conversion offers a cost-effective alternative to the purchase of complete luminaires. The existing mast systems and luminaires are retained, only the light source is replaced.
