

PrimeLine

The high-power spotlight for existing mast installations

The new PrimeLine is a maintenance-friendly LED high-power spotlight which is ideally suited for retrofitting or lighting large areas. With a power consumption of up to 280 W, it impresses with 27,000 lumens of luminous flux. The larger version [PrimeLine CL2](#) even convinces with double power.

The extremely powerful light output, the low weight and the easy installation impress many customers. On request, the high-performance spotlights can be supplemented with intelligent control and switching devices such as timers or dimming functions. In addition, other types of mounting, such as chain suspension, are also possible if required. We will be happy to advise you on this.

Reflector system variants

Various light distributions are possible for the PrimeLine, depending on the location and the desired light output. Ask our technical consultants for the best solution for your next project!
