

It's time: light with responsibility

Historic aesthetics meet modern efficiency. For cities with vision.

Our cities tell stories – in their façades, in their squares, along their streets. Historic street lighting is more than just light: it characterises the cityscape, creates identity and creates atmosphere. But behind the nostalgic façade lies great potential for change.

Sustainably retrofitted - stylishly preserved

BRAUN Lighting Solutions combines traditional design with the latest LED technology. Whether it's a listed old town or a historically inspired new build – we preserve the characteristic look of your streetlights while upgrading them to state-of-the-art, energy-efficient components.

- *Lower energy consumption* – thanks to highly efficient LEDs with a long service life
- *Cost savings* – significant reduction in maintenance and electricity costs
- *Concrete climate protection* – every converted light saves CO₂
- *Preserving valuable cityscapes* – thanks to true-to-original or style-adapted designs

Lighting design with responsibility

We provide comprehensive advice to cities, municipalities, planning offices and energy suppliers: from analysing the current situation to feasibility studies and the implementation of complete retrofitting projects. Our speciality: luminaires that look like they used to – and work like they will tomorrow.

Your path to sustainable urban lighting

Switching to LED technology doesn't have to be a change in style. With BRAUN Lighting Solutions, you are opting for a solution that preserves tradition, protects the environment and reduces the burden on the budget in the long term.

Convert now - for a beautiful cityscape with a future

Whether it's one luminaire or an entire street: we support your project with experience, passion and responsibility.

Get in touch with us - together we'll show your city in the right light.
